# **Roundtablediskussion Wie Ransomware normal wird**

Elias Noll, Account Executive  
20.11.2025

# Why Backup isn't enough

# Continuous availability from edge to cloud

Orchestration | Automation | Analytics

## Disaster Recovery

Radically reduce data loss and downtime with lowest RTOs and RPOs

## Ransomware Resilience

Real-time detection, protection, and cyber recovery

## Multi-Cloud Mobility

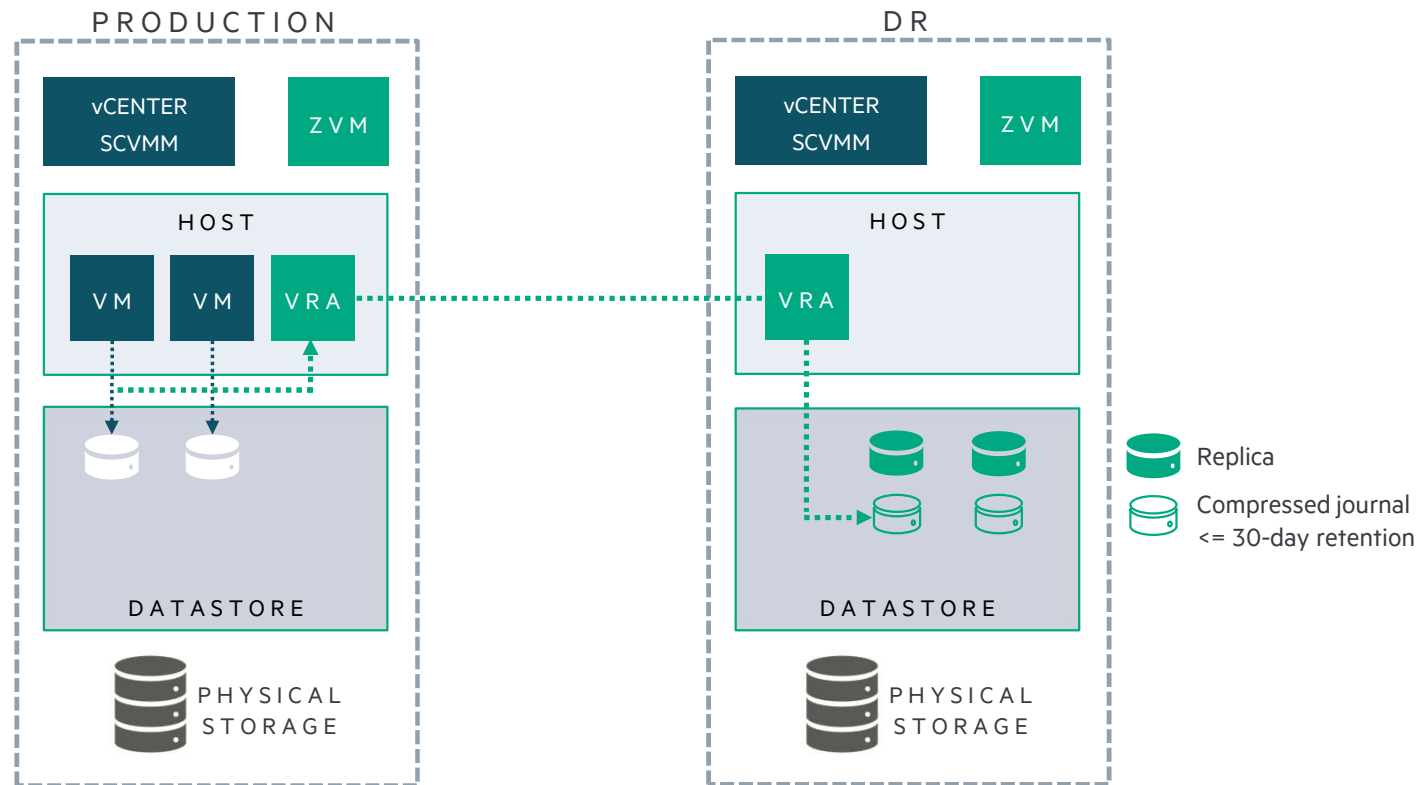

Freedom to move and protect across clouds

### Continuous Data Protection

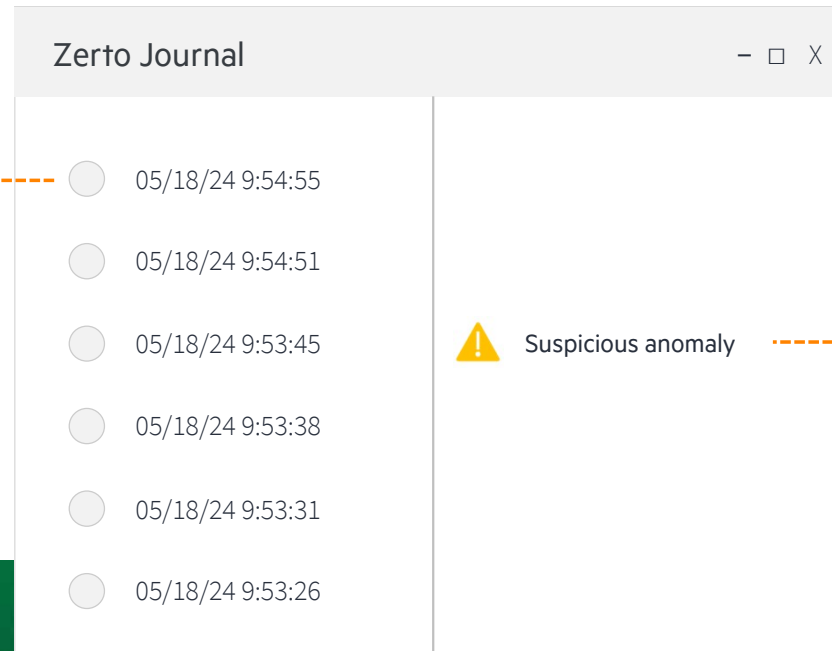

# Zerto architectures

Continuous replication to disaster recovery site

# Replicate and detect

**Replicate** every change and log as recovery checkpoints every 5-15 seconds

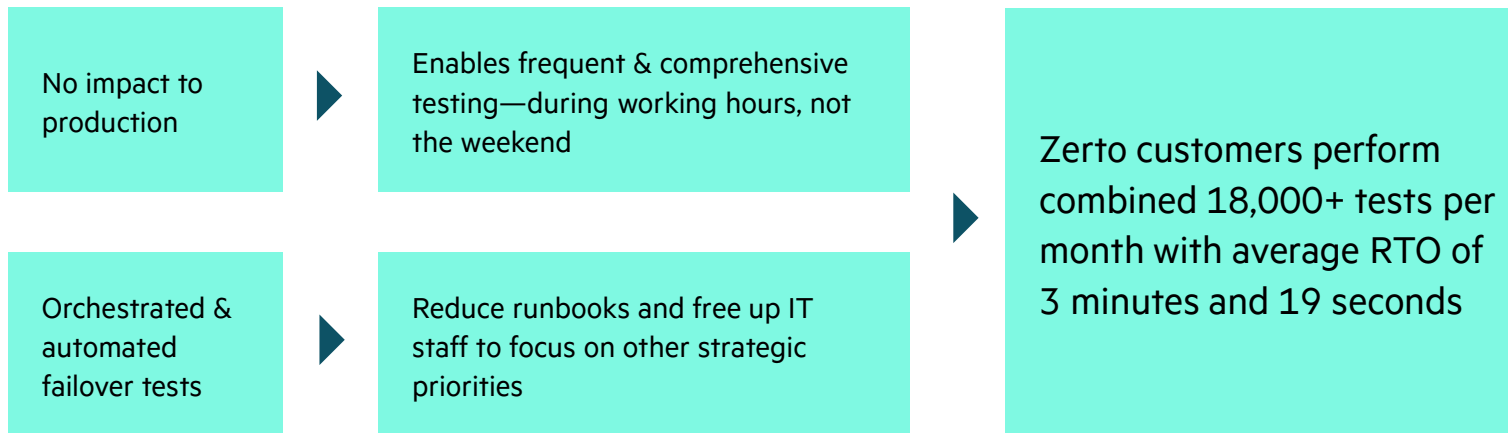

**Detect** suspicious writes as they stream in and flag for admins to investigate

“[Zerto’s] real-time ransomware detection puts us in a much stronger position to both identify and mitigate ransomware attacks. This gives us confidence that we can proactively meet the risks presented by ransomware.”

– Network admin at manufacturing customer

# Non-disruptive testing

Easily stress test your recovery plans or create on-demand sandboxes

# Thank You
