THE GREAT DILEMMA OF U.S. LABOUR

Automation⁹ Might End Most Unskilled Jobs In 10 Years

From A STAFF CORRESPONDENT in New York

IN America today, when management and labour meet to plan their joint future, the time-honoured causes for haggling — strikes and shut-outs and increased wages — are likely to be settled amicably and in a hurry.

The union may be moderate in its wage demands and the company more willing to yield, for both are anxious to grapple with the complexities of automation, which are fast engulfing the nation's economy.

As the effects of economic recession become the problems of yesterday, no those of automation are being seen more clearly now than ever as a challenge that must be met today.

There are 500,000 fewer full-time jobs today than there were three years ago, and a recent survey of 500 manufacturers shows that increased emphasis on automation will displace about 325,000 factory workers next year. This pressure is effecting a drastic re-

vision in the long-range thinking and planning of many unions. Already it is nudging the precarious balance of industrial power between management and labour.

Although many unions are still immensely wealthy, each day there are compelling reminders that labour's strength is on the downgrade and that its leaders may soon be presiding over the dismantling of their empire as they find new approaches to the challenges thrust upon them by automation.

Many major unions, including the Teamsters, Meat

... it used to take 200 men to produce 1,000 radios a day. Now it takes only two. . . . In Texas, a computer controls an oil refinery.

Among responsible labour officials it would be difficult to find opinions comparable to those which led to the machine-wrecking riots of eighteenth-century England. There is a general awareness that automation's rush into a future swirling with social and economic changes, so far only hazily understood, imposes joint responsibilities on Government, management and

One study group has estimated that 2,500,000 jobs will have to be created every year for the next decade merely to provide for new workers and those laid off by automation.

What may be the wave of the future for all labour already has swept over bit by bit to the John L. Lewis' United Mine Workers, the union that set the pattern for unionizing the mass-production industries and for modern collective bargaining and the use of the strike technique. The miners are rich in memories and money—200 million dollars in their treasury and pension

The three stages of career development:

1. I can't wait until I'm important enough to be included in meetings.
2. I feel so important being in these meetings!
3. I will do anything legal and several illegal things to avoid these meetings.
