

The Business Value of IT: Gibt es den IT-Wertbeitrag? Und wenn ja, wie kann man ihn messen und steuern?

MAG. CHRISTIAN KUDLER

KYNDRYL
STRATEGISCHER IT-BERATER

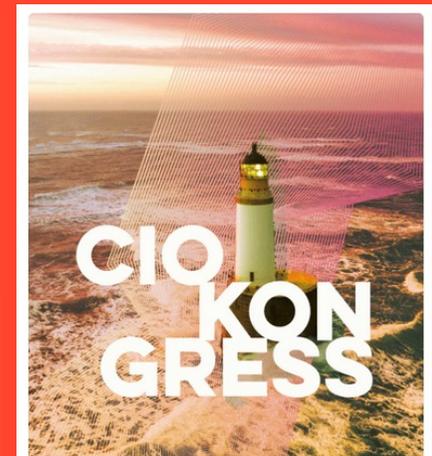

Christian Kudler ist seit mehr als 20 Jahren als Strategischer IT-Berater tätig. Vor 10 Jahren hat er zusätzlich die Leitung des Bereichs Business Development und Vertrieb von IBM Global Technology Services übernommen. 2021 war er gesamtverantwortlich für den Spin-Off dieses Bereichs in die Kyndryl Austria GmbH. Seine fachlichen Schwerpunkte sind Business/IT-Alignment und der IT-Wertbeitrag.

GÜNTER KUGLER

KYNDRYL
ADVISORY & IMPLEMENTATION SERVICES

Günter Kugler blickt auf ein 20-jährige Data Center Erfahrung im Bankenumfeld zurück mit der Gesamtverantwortung für die Architektur, Entwicklung, Beschaffung, Implementierung und dem Betrieb der IT-Infrastruktur. Bei Kyndryl leitet er heute das IT-Consulting und die Technologie- und Architekturberatung.

Kyndryl Cloud Management Platform (KCMP)

Why KCMP

Capturing the full value of multicloud is complex, costly and difficult - and most companies siloed in multiple clouds

Value capture requires sophisticated multicloud management technology and operating models

Siloed cloud operating models

Struggle to realize cost and performance benefits from multiple clouds

- Constrained developer capabilities
- Siloed teams and ineffective communication
- Limited services
- Lack of visibility
- Skill deficiencies
- Manual correlation of data + manual processes
- Poor site reliability
- Inadequate, disparate tooling

Hybrid multicloud operating models

Continually improve cost / performance, optimizing cross-provider cloud capabilities

- Improved developer productivity
- Integrated collaboration
- Best of breed services
- Visibility and optimization
- Faster innovation
- Automation and AI in operations
- Improved site reliability
- Single pane of glass

Why KCMP

KCMP simplifies management of heterogenous multicloud architectures, with comprehensive functionality and integration

1 Your Teams (internal + service providers)

1 Teams and Services

- Talent needs supported by Kyndryl services
- Human roles augmented with AI
- Easy, integrated workflows and views with data fusion

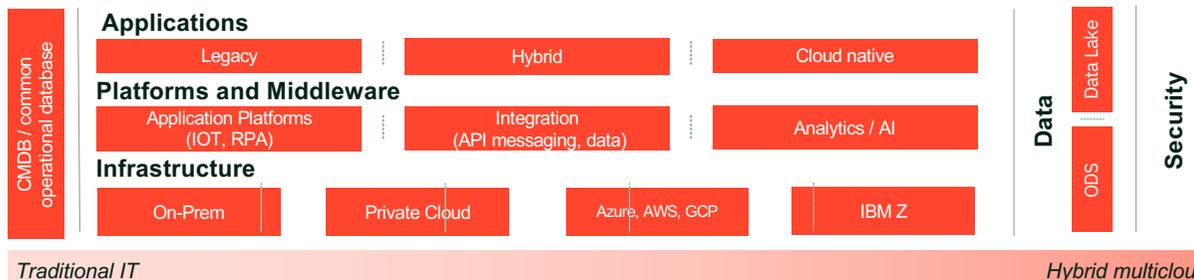

2 Management Control Plane

2 Management Tools

- Single modular platform + OOB integrations
- Deep expertise and proven history with multicloud management
- Increased automation

3 Tech Stack

3 Tech Stack

- Cloud-agnostic mgmt. across providers
- Flexible, dynamic sourcing based on best of breed and cost (cloud agnostic)
- Location on-demand in real time in full hybrid operations

Introduction – KCMP is a platform to manage your heterogenous IT estate, provided by Kyndryl

Operations

Ensuring the availability and performance of applications in production

Governance

Gain near real-time visibility into cost across multi-provider services

Consumption

Provision the tools of your choice, either individually or from a pre-defined template, on the cloud of your choice

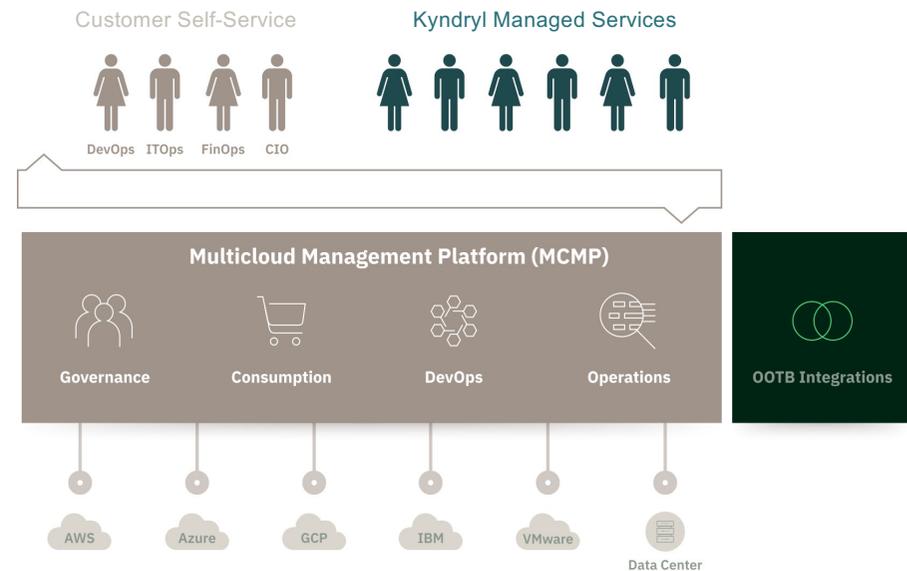

DevOps

View development, build, and test metrics from DevOps tools running on RHEL or OpenShift

OOTB Integrations

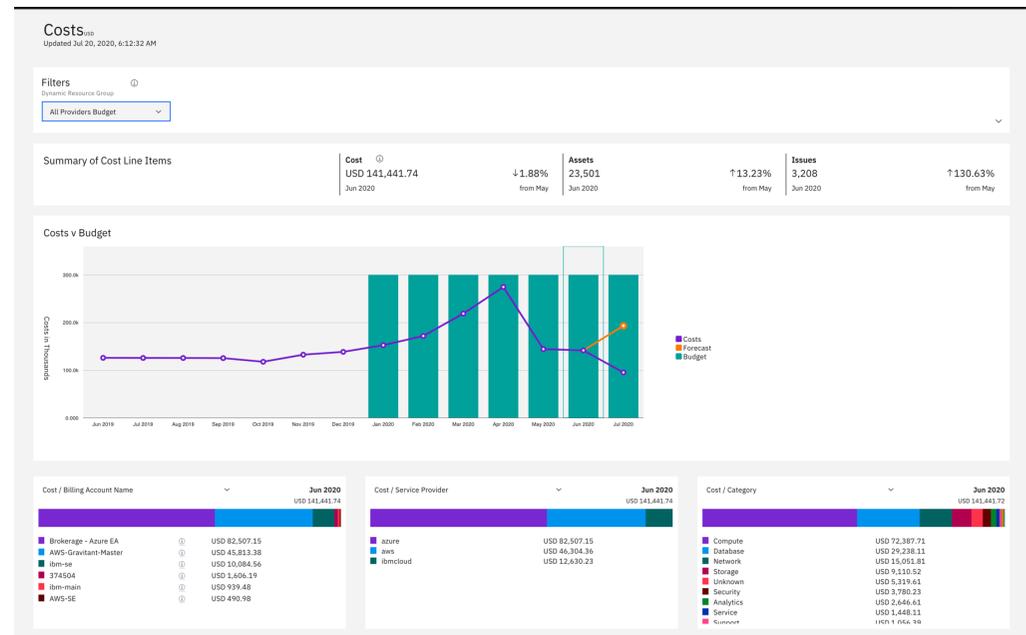

Integration with existing out-of-the-box third party solutions as needed

Kyndryl Cloud Management Platform Financial Governance Console

Visibility. Asset Utilization. Optimization Insights.

- Gain visibility into:
 - Cost across multi-provider services with projected costs with deviation from budget and trends
 - Cloud asset inventory utilization, current asset inventory trend and deployment across geos
- Manage costs by optimizing reserved vs. on-demand instances
- Gain data-informed recommendations for reducing costs, improving performance and reducing security risks
- Receive and proactively respond to variances and deviations before they become problems

Example value drivers

2 AI-based insights and optimization

Optimize cloud usage with automated recommendations to shut down unused resources

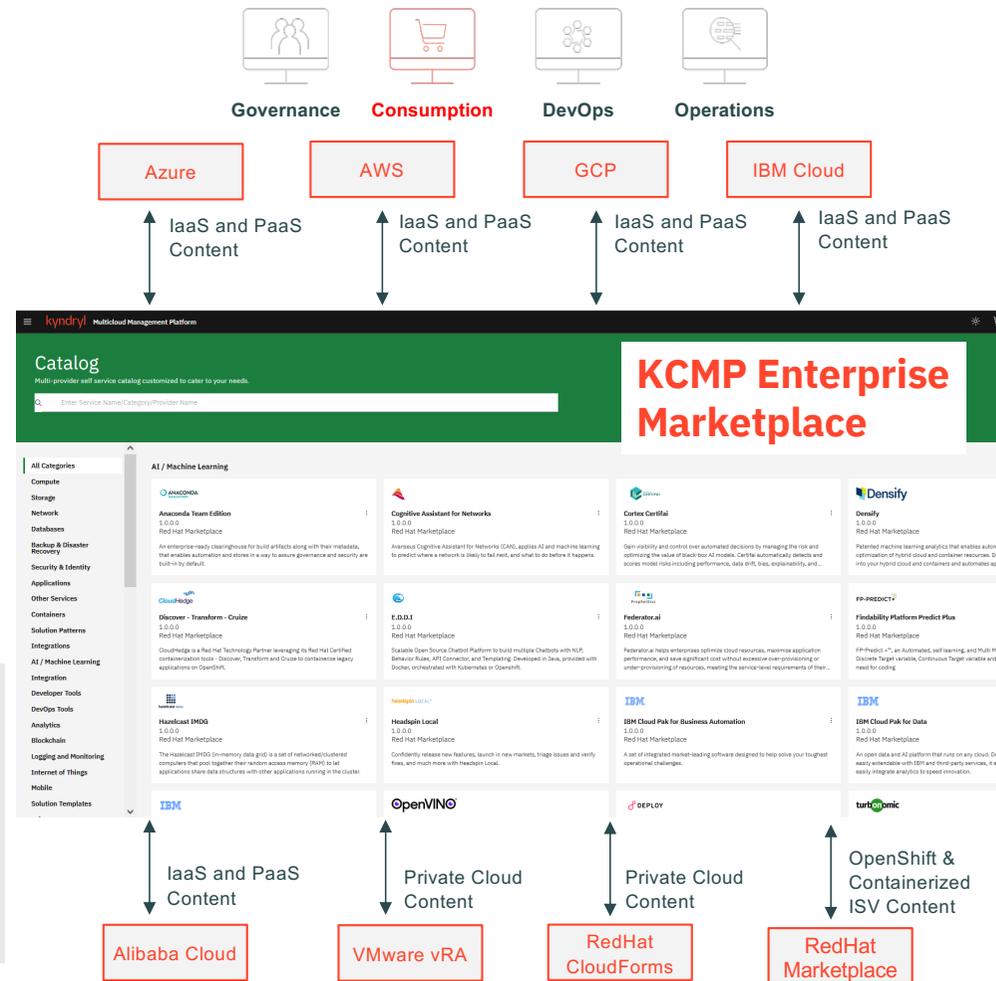

5 OOB integrations across tools, processes, data

Kyndryl Cloud Management Platform Consumption Console

Multicloud Consumption Governance

- Curated catalog of services filtered based on user's role(s)
- Configure and provision resources across public cloud, private cloud, and on-prem environments
- Unified consumption experience across multiple cloud providers while maintaining the unique configurations and capabilities of each
- Contracted, discounted pricing in real-time, with pricing uplift for managed services
- Define policies to enforce budgets and categories and auto-approve or deny orders
- Workflow approvals for technical and financial approval
- Integration with ServiceNow for workflow approvals and CMDB updates

Value Drivers

Governance, risk, and compliance

Ensure that new provisioning orders are within the financial budget's setup for the organization

Next-gen applications development

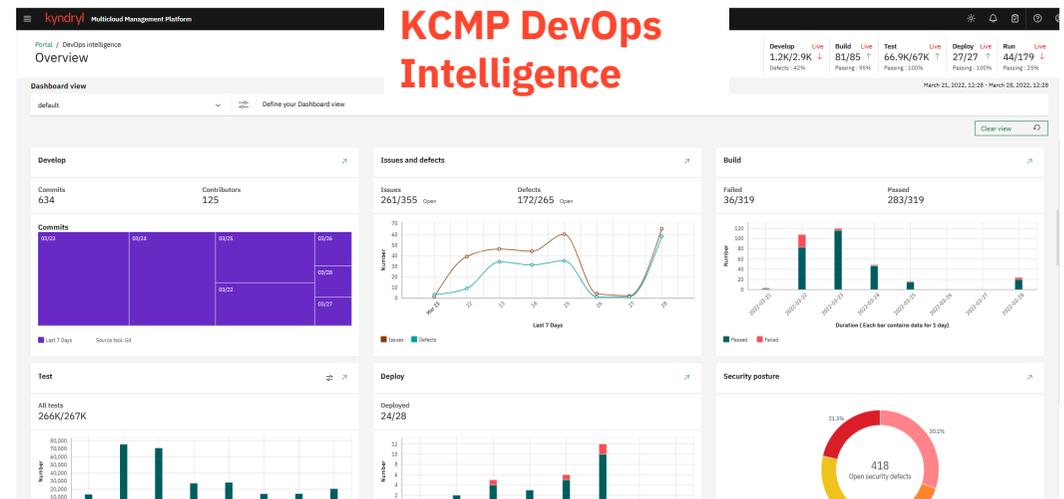

Reduce provisioning lead-time with self-service catalogs and automated approval workflows

Kyndryl Cloud Management Platform Dev(Sec)Ops Console

Aggregated CI/CD pipeline view. Container Health. Security.

- Aggregated view of CI/CD pipelines, showing status of build, test, deploy and run
- Growing list of DevOps tools (GitHub, Jira, Jenkins, GoCD, TravisCI, SonarQube...) and Cloud providers (IBM, Google Cloud, Azure, AWS)
- Container discovery and monitoring with logs access
- Aggregated view of container utilization
- Geographic view of container locations
- Continuous scanning of VM and container workloads
- Configurable security policies

Example value drivers

3 Lifecycle management

Manage full DevOps project lifecycle

6 Next-gen app development

Build in security and compliance into dev. processes and tool chains to reduce developer security concerns

Kyndryl Cloud Management Platform Operations Console

On-Prem and Multicloud Inventory, Health and Service Management Visibility

- Single pane visibility into health and performance of IT Operations across Data center, Mainframe and multi-cloud environment
- Extensibility framework to bring your own data sources, dashboards, and ML.
- Basic Container Management to manage Kubernetes and OpenShift clusters
- Infrastructure health in application context

Actionable Insights using Machine Learning & AI

- Faster problem diagnosis by automated correlation of tickets, events and alerts
- False Ticket Analysis reduces noise
- Resolution recommendations and Next Best Action
- Change Risk and Change Induced Incidents
- Proactive insights support quick identification and resolution of IT issues reducing Mean Time To Resolve (MTTR)

Next Generation Ops

- Automated actions via Ansible, multiple automation engines
- Bring your own Runbooks/playbooks to manage your Infrastructure workflows
- ChatOps support

Ensure the availability and performance of the platforms supporting the applications of your business.

Visibility

Improve incident and performance monitoring through real-time health and usage metrics

AI-based insights and optimization

Leverage AI/ML to reduce event noise & prioritize tickets, resolving incidents faster
