AI CAN NOW WRITE GENOMES FROM SCRATCH AS NVIDIA UNVEILS EVO-2, THE LARGEST AI MODEL FOR BIOLOGY, MODELING THE GENETIC CODE OF LIFE

SWIPE FOR MORE

airesearches · Folgen

airesearches Follow (us) @airesearches for more AI breakthroughs!

AI can now design genomes from scratch. The Arc Institute and NVIDIA have introduced Evo-2, a powerful 40-billion-parameter AI model trained on 9.3 trillion DNA base pairs from over 128,000 species, spanning all domains of life.

Scientists are already testing Evo-2's capabilities. In early trials, the model achieved state-of-the-art accuracy in classifying BRCA1 gene variants—crucial for breast cancer research—predicting the impact of previously unknown mutations with 90% accuracy.

"Evo-2 marks a significant milestone in generative genomics," said Patrick Hsu, cofounder of Arc Institute and bioengineering professor at UC Berkeley. His statement highlights the model's potential for advancing research, healthcare, and environmental science.

Für dich

sodiumvapours now imagine these kinds of AI systems working in concert with microsoft's new majorana quantum computer tech..... I think microsoft is actually downplaying the significance of it. I actually think it is quite literally world changing but they dont want people to lose their minds over it. Now imagine: AI that is smarter than all humans combined but can still reason in a human like-fashion (very close to getting there) and then a quantum computer that is faster than EVERY PC ON EARTH COMBINED? AND THEY WORK TOGETHER? We are seriously not ready for this. We're talking about things that would take billions of years to calculate being done in mere minutes or seconds. No gradual ramp up in processing power over hundreds of years, just straight to being able to solve unfathomable calculations that would never ever be able to be solved by man and traditional compute alone. PEOPLE ARE NOT GRASPING THE IMPORTANCE OF THIS THIS IS BIGGER THAN ANYONE REALIZES

CHAT oriented PROGRAMMING

Web/Development lovable.dev

The screenshot displays the Lovable AI development environment. On the left, a chat window contains a prompt: "Design a modern, conversion-optimized landing page for an athletic apparel brand, inspired by Nike's Austrian website. The page should include: A prominent hero section featuring high-quality images of flagship products. Clear navigation menus for Men, Women, and Kids categories. Sections highlighting new arrivals, bestsellers, and exclusive collections. Integrated customer testimonials and social proof elements. A footer with links to customer service, store locator, and company policies. Ensure the design is visually appealing, user-friendly, and mobile-responsive to enhance user experience and drive conversions." Below the prompt, Lovable provides a "Design Inspiration" list and a "Features for V1" list. The main area shows a live preview of the generated landing page for "ATHLETIX". The page features a navigation bar with "Men", "Women", and "Kids" dropdowns, a hero section with a large image of a man tying his shoes and the text "Elevate Your Performance", and a "Shop Now" button. The preview also shows a "New Collection Spring 2024" banner.

Design a modern, conversion-optimized landing page for an athletic apparel brand, inspired by Nike's Austrian website. The page should include:

- A prominent hero section featuring high-quality images of flagship products.
- Clear navigation menus for Men, Women, and Kids categories.
- Sections highlighting new arrivals, bestsellers, and exclusive collections.
- Integrated customer testimonials and social proof elements.
- A footer with links to customer service, store locator, and company policies. Ensure the design is visually appealing, user-friendly, and mobile-responsive to enhance user experience and drive conversions.

Lovable

Let me help you create a stunning athletic apparel landing page inspired by Nike's Austrian website. Here's my plan:

Design Inspiration:

- Clean, minimalist aesthetic with bold typography
- Dynamic hero section with large product imagery
- Smooth transitions and subtle hover effects
- Focus on product presentation and clear CTAs

Features for V1:

- Hero section with full-width image slider
- Navigation menu with dropdown categories
- Featured collections grid
- Testimonials section
- Newsletter signup
- Responsive footer

1. 8-year old building a chatbot

What can an 8-year-old build in 45 minutes with the assistance of AI?

My daughter has been learning to code with [@cursor_ai](#) and it's mind-blowing 🤖

Here are highlights from her second coding session. In 45 minutes she built a chatbot powered by [@CloudflareDev](#) Workers AI 🤖

@tsarnick

to arbitrary digital command,

futuretech

IN THE NEXT 3 TO 6 MONTHS,
AI IS WRITING 90% OF THE CODE
AND IN 12 MONTHS, NEARLY ALL CODE
MAY BE GENERATED BY AI

SWIPE

futuretech · Folgen

futuretech In a recent interview, Anthropic CEO Dario Amodei made a bold prediction that's shaking up the tech world! 🌐

According to Amodei, within the next 3 to 6 months, AI will be responsible for writing a staggering 90% of all code. But that's not all—he predicts that in just 12 months, nearly all code could be generated by AI.

This rapid advancement raises exciting possibilities and big questions about the future of software development, coding jobs, and how businesses will adapt. Will human coders become mentors and guides for AI, or will they shift to entirely new roles?

One thing's for sure: the landscape of programming is changing fast, and those who adapt will be at the forefront of innovation. What are your thoughts on this? Are you ready for the AI coding revolution? Let me know in the comments!

Für dich

29truck As a software dev, it sounds like drastic wishful thinking. The amount of adjustment required for current AI models is staggering, and that is for minimal work (such as automated unit tests). Given how many tech companies are still using outdated technology for production environments, it seems farfetched that so much of the world will be reliant on bleeding edge tech written by bleeding edge processes so quickly.

sengarofficial_ Don't worry, nothing will happen!! All models need fine tuning with respect to time, responses are not 100% correct. Just like human mind, AI models will behave. Some are more trained parameters like experienced resource will solve errors easily and some are less parameters trained will take time or won't able to solve and some problems will not solve by both. AI will not able to correctly adjust the components and even css styling ...!! But it does help you in debugging fast give you elementary ideas for solving any problems.

5. Planning a weekend trip

```
components, hooks, and user pages.
Now I'll begin creating the website structure based on our analysis of Apple.com, implementing the
navigation bar, hero sections, and product showcases with the same clean, minimalist aesthetic.

- Creating basic website structure and layout
- Creating website structure based on Apple.com's design patterns
- Executing command: npm run dev
- Creating website structure based on Apple.com's design patterns
- Editing file: index.html
- Creating website structure based on Apple.com's design patterns
- Editing file: index.html
- Creating website structure based on Apple.com's design patterns
- Editing file: index.html
- Creating website structure based on Apple.com's design patterns with navigation, hero sections, product
cards, and footer
- Executing command: npm run dev
- Creating website structure based on Apple.com's design patterns and preparing placeholder images for
product sections
- Executing command: npm run dev
- Creating website structure based on Apple.com's design patterns and preparing image assets for product
sections
- Editing file: index.html
- Creating website structure based on Apple.com's design patterns and preparing image assets for product
sections
- Editing file: index.html
- Moving to implement core components including header/navigation bar, hero section, product showcase
sections, and footer

- Summary
I've made significant progress on creating our Apple-inspired website! Here's what I've
accomplished:
1. Created the basic website structure with a clean, minimalist design that mirrors Apple's
aesthetic.
2. Implemented Apple-specific CSS styles including their color scheme, typography, and spacing
patterns.
3. Built the main components:
```

3. Clone Apple website

It created a copy of Apple website that looks almost the same, with animations and all.
